

IAMOT Research Publication Awards

Year 2009

For being in the top percentile of researchers in Technology and Innovation Management, an international field that includes thousands. The excellence in research publication award is based on academic journal publication record over the last 5 years.

Started in 2004, every five years, the Association recognizes the highest publishing scholars in the MOT and related fields over the last five years in archival journals. The IAMOT publication committee sets the selection rules; identification of the journals, and the number of publications. Multiple awards are awarded under this category. The recipient receives a plaque, certificate, notification letter to the awardees' institution, one year IAMOT membership, and recognition by IAMOT in its website and journal.
